About me

Junior Full Stack Developer passionate about building robust and scalable solutions. Hands-on experience developing applications using Java, .NET, C#, React, and MySQL databases. I stand out for my ability to quickly adapt to new technologies, collaborate effectively in multidisciplinary teams, and apply development methodologies that ensure clean, efficient, and maintainable code.

Experience

Freelance Developer – Remote
January 2025 – Present

- Developed CRUD applications using .NET and React for practice and local clients.
- Designed responsive layouts with Tailwind CSS and semantic HTML.
- Connected to MySQL databases using Entity Framework and performed backend data validation.
- Version control with Git and deployed projects on Vercel and Netlify.

Projects

TaskFlow

- Developed a RESTful API using Laravel for dynamic management of courses and categories.
- Built a React frontend with real-time search and filtering.
- Implemented secure authentication with JWT.
- Created an admin panel with custom roles and permissions.

TuLook

- Web app for stylists and manicurists to create profiles and manage appointments.
- Used React for an intuitive and responsive user interface.
- Integrated backend for user and booking management.
- Modern styling with Tailwind CSS for mobile and desktop compatibility.
